ECHT

Paving the way for chemicals traceability for circular textiles

Most fashion brands don't know which chemicals are used in their textiles – the information gets lost across global supply chains. In view of the industry's high waste generation and low recycling rates, this poses an extra challenge.

The ECHT project brings together industry, NGOs, policymakers and researchers to shape a shared vision for full chemicals traceability by 2040 and create practical tools, including a learning platform and a simulation game, helping the industry build capacity across sectors for cleaner, safer and recyclable textiles.
